C. R. No. 1010269764 | CMA License No. 09134 - 37

Objective of the Fund		Fund Informaiton as at the end of the Quarter					
Alinma Nomu Market Equity Fund is a public open-ended fund. The objective of the Fund is to grow the invested capital over its term by investing primarily, and through active management, in the shares of companies listed on the Saudi Parallel Market (Nomu), as well as in initial public offerings (IPOs), rights issues, and remaining offerings on the Nomu market. It may also invest in shares of companies that have transitioned from the Parallel Market to the Main Market for a period of five years from the date of their transition, provided such investments are approved by the Fund Manager’s Shariah Committee. Additionally, in order to manage liquidity effectively, the Fund Manager may hold investments in cash, or invest in Murabaha transactions, as well as money market transactions and funds.		* Total Expense Ratio (TER)	SAR	56,260.55	0.22%		
		* Borrowing Percentage	SAR	0.00	0.00%		
		* Dealing Expenses	SAR	0.00	0.000%		
		* Investment of the Fund Manager	SAR	0.00	0.00%		
		* Distributed Profits	SAR	0.00	0.00%

Fund Performance since beginning							
Description of formulas utilized for assessing performance and risk measures							
Standard Deviation:	Standard deviation is a statistical measure that shows how much the values in a data set spread out or deviate from the mean (average) of the data. The standard deviation equals the square root of the sum of the squared differences between each value and the mean, divided by the number of values minus one						
Sharpe Indicator:	The Sharpe ratio measures how much excess return you earn for each unit of risk you take. In words, the formula is: Sharpe Ratio = (Average return of the investment – Risk-free rate) ÷ Standard deviation of the investment’s returns						
Tracking Error:	Tracking Error measures how closely a portfolio follows the benchmark it is supposed to track. It shows the volatility of the difference between the portfolio’s returns and the benchmark’s returns. Essentially, it tells you how much the portfolio’s performance deviates from the benchmark. The most common formula for tracking error is the standard deviation of the difference between the portfolio returns and the benchmark returns						
Beta	Beta (β) is a measure of a mutual fund’s sensitivity to market movements. It shows how much the fund’s returns tend to move in response to changes in the overall market (typically represented by a benchmark index). Beta equals the covariance between the mutual fund’s returns and the market’s returns, divided by the variance of the market’s returns.						
Alpha:	Alpha is a measure of a mutual fund’s performance relative to a benchmark index, adjusted for the risk taken. It indicates the value a fund manager adds or subtracts from a fund’s return compared to the expected return based on the fund’s risk. Alpha = Actual return of the fund - (Risk-free rate + Beta of the fund × (Market return - Risk-free rate))
